

MAXIMILIAN COZZONE

JUNIOR CYBERSECURITY | IT SUPPORT | SECURITY-FOCUSED SOFTWARE PROJECTS

Brussels, Belgium / Allentown, PA | +32 492 76 79 69 | Max.cozzone1@gmail.com

GENERAL COVER LETTER

Dear Hiring Team,

I am seeking an opportunity in cybersecurity, IT support, SOC operations, or security-focused technical work where I can contribute a practical foundation in Linux, networking, documentation, troubleshooting, and hands-on security labs.

My IT support experience at Walmart gave me direct exposure to operational technology environments, including 400+ warehouse devices, DHCP/IP issues, RJ45 and Ethernet cabling, routers, switches, workstations, and hardware checks. My earlier leadership experience at Amazon strengthened my ability to coordinate priorities, document blockers, train teammates, meet deadlines, and escalate issues clearly.

Outside of work and school, I continue building technical depth through projects and labs. My GitHub portfolio includes a Bash HIDS project, a Python port scanner, Packet Tracer networking work, and security framework documentation. I also practice with Wireshark, Nmap, Burp Suite, TryHackMe, Hack The Box, Linux, Kali, Bash, Python, SQL, Git, and GitHub.

I bring a reliable junior technical profile: disciplined, process-driven, comfortable with documentation, and focused on learning through practical work.

At BeCode, I completed a 7-month cybersecurity program covering incident response, HIDS concepts, vulnerabilities, remediation, legal and compliance topics, CCNA basics, group projects, reports, and presentations. I am also studying toward CompTIA A+, Network+, and Security+ knowledge areas.

I am fluent in English and French, comfortable working in structured teams, and ready to support professional environments where accuracy, communication, and follow-through matter.

Sincerely,

Maximilian Cozzone
